

# Low Voltage Saws

## Corded electric

The CC5 and CC6 models combine the latest technological features with a functional, ergonomic handgrip. The smooth contours are designed to fit comfortably in the hand while providing the ideal cutting position. The balanced weight distribution increases manoeuvrability and helps to reduce wrist fatigue.

On the CC5 model, the dust extraction path is ducted internally through the handpiece which significantly improves visibility and handling in comparison to conventional saws fitted with extraction.

Rubber motor mounts insulate the internal mechanism from the outer case. This results in extremely low noise and reduces vibration to the operators hand.

A two speed control on the handpiece gives a quieter, low speed setting which is ideal for use with children and a high speed setting for fast removal of thick body casts.

### Power Supply

CC5 and CC6 saws require their own low voltage power supply unit. On the CC5 model, the power supply is integral with the dust extraction unit. CC6 Saw is supplied by the PS6 power supply unit. See opposite page for options.

Optional wall mounting bracket.

Part No. 7670

### Handpiece Specification

High oscillating speed	16000 cpm
Low oscillating speed	11800 cpm
Voltage	22/29 Vdc
Weight	850 grams
Sound level	68 dB(A)
Length	245 mm

See opposite page for ordering instructions.  
See page 8 and 9 for accessories and saw blade options.
